

# Enterprise Mobile Distribution Solutions

## Managing Field Dispatch

The Logistics Distribute application is built for companies such as soft drink bottlers, grocery chains, manufacturers, etc., that have to manage their supply chain effectively in a mobile setting.

Currently, companies can plan and schedule deliveries before vehicles leave the warehouse. Once the vehicles leave the warehouse, most companies use fleet tracking solutions that only track the vehicle location and some vehicle related parameters. These solutions however do not allow for schedule changes enroute, new trips, orders, delivery additions in real-time, nor does it provide for electronic notification of events such as delivery of goods to customers or inventory tracking. These activities are handled manually and via phone calls resulting in an inefficient process.

The Logistics Distribute solution automates the field distribution process thereby saves money, improves productivity and helps deliver improved customer service.

## Simple set up with integration

The Distribute solution is simple to set up and implement. The only investment the Company needs to make is on a Android smart phone or tablet. The solution is web accessed and can be connected to your ERP or CRM systems eliminating additional data entry.

Contact us and let us tell you how we can make a difference!!!

## Track, Monitor, Send Orders

The Logistics Distribute solution automates all of these field distribution processes which allows the company to track all events as they occur, make changes operationally as needed, add orders and trips and monitor vehicles.

## Real time invoicing

The solution provides the ability to record events in real-time such as delivery, etc and to initiate electronic invoicing tied to such events. This saves time and costs.

## Customization

We recognize that one size does not fit all and therefore work with our clients to customize functionality to meet their specific business requirements.

## Managed Solutions

Our solution is offered as a fully secure managed solution in the cloud enabling speed of implementation and eliminates infrastructure expenses.
